

Aircraft and Ground Noise:

Aim: “to monitor and manage noise impact on the surrounding community”

LLAOL understands noise is the source of most concern for some local community members and is committed to manage airport noise by:

- adopting a proactive approach to noise monitoring.
- dealing with noise complaints in a timely manner.
- sharing information with community members.
- operating a Night Noise Policy, that is developed in conjunction with the London Luton Airport Consultative Committee.
- working with airlines and London Luton Airport’s Air Traffic Service provider to develop noise minimisation programmes (e.g. Continuous Descent Approaches and adherence to Noise Preferential Routes).
- applying a penalty system to departing aircraft that exceed set noise levels.
- monitoring ground engine running to minimise noise disturbance.
