

Ecology and Landscape

Aim: “to enhance and promote ecology and landscape value”

Airport operations interact with the local environment and therefore potentially impact on the local ecology and landscape. LLAOL commits to meet the above objective by:

- to develop a habitat management plan for the airfield in 2009.
- avoiding ecological disturbance both during normal Airport operations and any development, where possible.
- providing stewardship and long-term management of the airport's ecological and landscape assets.
- positively contributing towards the enhancement of surrounding ecology and landscape value, engaging with employees and local people.
