

Environmental Policy

London Luton Airport Operations Limited (LLAOL) recognises that its business activities and operations have environmental consequences and will continuously review its environmental performance to seek to minimise and manage those effects. In pursuit of this, LLAOL commits to:

- comply with relevant environmental legislation.
- maintain a formal Environmental Management System which demands continual improvement of its environmental performance.
- prevent pollution by controlling its emissions to air, land and water wherever possible.
- identify, monitor and manage the impact of noise on the surrounding community.
- minimise airport-related CO₂ emissions, including adopting a proactive approach to energy management.
- minimise waste and increase levels of recycling.
- encourage the use of more sustainable transport modes by employees, passengers and visitors to the Airport.
- enhance the ecological and landscape value of the airfield and surrounding area, where possible.
- communicate the Environmental Policy to employees, passengers, business partners and the local community.
- inform and educate LLAOL employees and business partners on environmental issues relevant to the Airport.
- undertake an annual review of environmental policies, objectives and targets.

This Environmental Policy will encompass those business activities, services and locations directly under the control of LLAOL. Where LLAOL does not have direct control, it will seek support from business partners to work towards the principles of this policy.

Glyn Jones – Managing Director, London Luton Airport
